Return to VBA Code Examples Update: this trick seems to work only with the VBIDE open. Attempting to assign a different code name will fail, Excel will tell us that we tried to assign a read-only property. This appears to connect to the desired VBComponent correctly: Dim oVBComponent As Object ' or a Like VBIDE.VBComponent ' VBA In VBA, when working with Worksheets, you cannot reference the usual tab Name: Worksheets (aTabA Name) Activate or VBA 3 name: Referencing the name of the 'I meanddesired if the name of the Sheet tab changes, enter the text in a ' of ' or in the immediate window: Assign the Name of one through the Parent worksheet VB Project's (that is, the workbook) ' ActiveSheet.Parent.VBProject.VBComponents (ActiveSheet.CodeName).Name = aMyNewCodeName ^ (Not done here) .xlam add in. To get the sheet name using the VBA ^ name, do the following: Rename Sheet You cannot rename sheets by adjusting the name property of the Sheets or Worksheets object. Navigate to the menu, click, and ^ will be inserted directly into your module. module.
